

ARCANA CONTINUUM

**A P2E GAME
THAT IS OUTTA
THIS WORLD**

WHITEPAPER

www.arcanacontinuum.com

ABSTRACT

In the year 2524, a large outer space anomaly appears above planet Earth, citizens are terrified of the entity – they have never seen anything like this. After months of meticulous research, scientists and space engineers discover the mysterious phenomenon is a wormhole. They name this wormhole “Arcana” since it is thought to be a portal to another habitable galaxy with new riches and minerals.

The “Arcana Continuum” space expedition fleet is formed, comprising some of humanity’s most advanced space technology. Each drafted citizen must get training and certification to become a pilot. Eventually, humanity succeeds in their voyage through Arcana, indeed discovering new planets and riches. The voyagers inhabit and build space stations across the Arcana Galaxy, each with its spacecraft and hangar.

The Arcana Continuum has been inhabiting the new galaxy for months. Voyagers begin to rebel and create their groups as the fleet begins to divide. Voyagers aspired to embark on their journey throughout the Arcana Galaxy, this sparks conflict and rivalries among the galaxy’s inhabitants.

Arcana Continuum is a unique gaming platform that allows you to trade tokens and NFTs while immersed in a virtual fantasy realm. You’ll find tremendous opportunities whilst playing various fun games.

Exploring the outer universe is the next big play-to-earn (P2E) game model, Arcana Continuum, which is developed by AMFI Digital and set to launch on the Ethereum network. Arcana’s most luxurious fleet of spacecraft. Fleet Size [redacted] Arcana Continuum NFT Spacecrafts will be launched after every first pilot acquires his Genesis Flight Pass, each with its own set of unique characteristics and stats. The Arcana Continuum cryptocurrency ERC20 token, \$ARCT, will be used to decentralize the digital galaxy

PURPOSE OF THIS WHITE PAPER

The purpose of this paper is to introduce the Arcana Continuum project, a virtual game metaverse that uses blockchain technology to establish an incentivized ecosystem. This document is intended for a general business audience, as well as gamers and metaverse enthusiasts.

The Arcana Continuum is a virtual galaxy that exists in the far future.

It is a metaverse, a virtual world with avatars, digital items, and functional economies, in which technology is all-encompassing. The metaverse is an alternative reality similar to the real universe, consisting of a collection of open worlds and settings that are linked through interoperable assets and experiences.

Non-fungible tokens (NFTs) are a key aspect of the Arcana Continuum metaverse. These blockchain-based cryptographic assets have unique identifying codes and information that distinguishes them from one another.

They cannot be traded or exchanged at equivalency. In contrast, cryptocurrencies are identical to each other and can be used as a medium for economic transactions.

Blockchain technology offers irrefutable proof of ownership, which is essential for the functioning of the Arcana Continuum metaverse. For example, if you purchase a ship in the game, the Arcana Continuum smart contract will provide you with evidence of ownership in the form of NFTs. This allows users to have complete control over their digital assets in the metaverse.

The Arcana Continuum is a virtual galaxy with many planets, each with its unique function. All items in the game are NFTs stored on the ETH blockchain and have a value determined by the players, the community, and investors. The Arcana Continuum offers endless possibilities for growth.

THE OPEN METaverse

A user of 'Metaverse A' cannot live in or transfer assets to 'Metaverse B', making it necessary for them to purchase assets in every Metaverse world.

To address this issue, software developers and Metaverse enthusiasts are working on a system of interconnected virtual worlds and galaxies, where users can enter another Metaverse and be able to transfer digital assets from other Metaverses into the current one.

The Open Metaverse aligns with the web 3.0 global objective. Arcana Continuum assets are designed for the Open Metaverse, allowing players and investors to purchase, create, or upgrade assets and export them to other Metaverses.

Our project mission is to collaborate with surrounding communities to build a system that combines economy, gaming, and NFTs. Our vision is to create a digital metaphorical world in space whose

applications will expand over time, a digital galaxy in space that expands into the surrounding universe.

The first planets and games to be released in our digital galaxy will be the most important features of Arcana Continuum. As the uses and players increase in the future, additional planets will be placed around the existing world.

We will determine how to continue building the Arcana digital galaxy in collaboration with our DAO and community, giving all our NFT holders the ability to vote on all matters within the project.

Our economic system is designed to balance the inflation of currency distribution with deflation in other activities, resulting in the value of the \$ARCT cryptocurrency increasing as the use of Arcana Continuum grows.

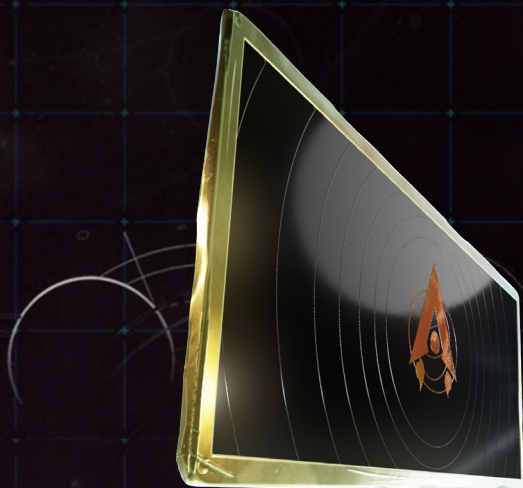

ARCANA'S FLIGHT PASS

There is a limited allocation of 899 Passes which go by the name "Arcana's Flight Pass." These rare, valuable flight passes allow holders to enjoy some of the most mind-blowing utilities, just as our first pilots deserve.

Within the Arcana Continuum, there's a mystery waiting to be unsolved by Flight Pass holders.

ARCANA CONTINUUM GAME MODES

The Arcana galaxy is boundless and different players, community members, and Arcana Continuum team members govern individual planets in the game. You can use your NFT spacecraft to travel between planets in Arcana. Currently, there is a wide range of planets in our beta.

WARZONE

The WarZone planet was first discovered in Arcana and is abundant in crypto resources. The planet was damaged and abandoned due to the Revolutionary War and heavy mining. While most of Arcana was declared a domination-free zone, several planets with abundant crypto resources remained in conflict zones because large corporations and militias established outposts there and continue to occupy them.

Each Arcana Continuum Spacecraft owner is permitted to enter the WarZone planet and participate in the war. Players with the most spacecraft destroyed every half hour will be rewarded with \$ARCT Tokens.

RACE

The Race mode is a time trial where players compete against the best time on the server. The Races are semi-procedural, so no map will be the same. On the race, you can anticipate hazards, collectibles, enemies, and many more surprises. Every four hours the maps will be regenerated and the top player in the server wins \$ARCT and gear.

MARKETPLACE

The Marketplace features NPC stores that offer a variety of gear types and ships with rotating wares. Each store has a limited amount of gear, but the gear in each store can change at a faster pace. Players can sell gear to the NPC store for a fixed price based on the rarity and stats of the gear.

ARCANA LIFE

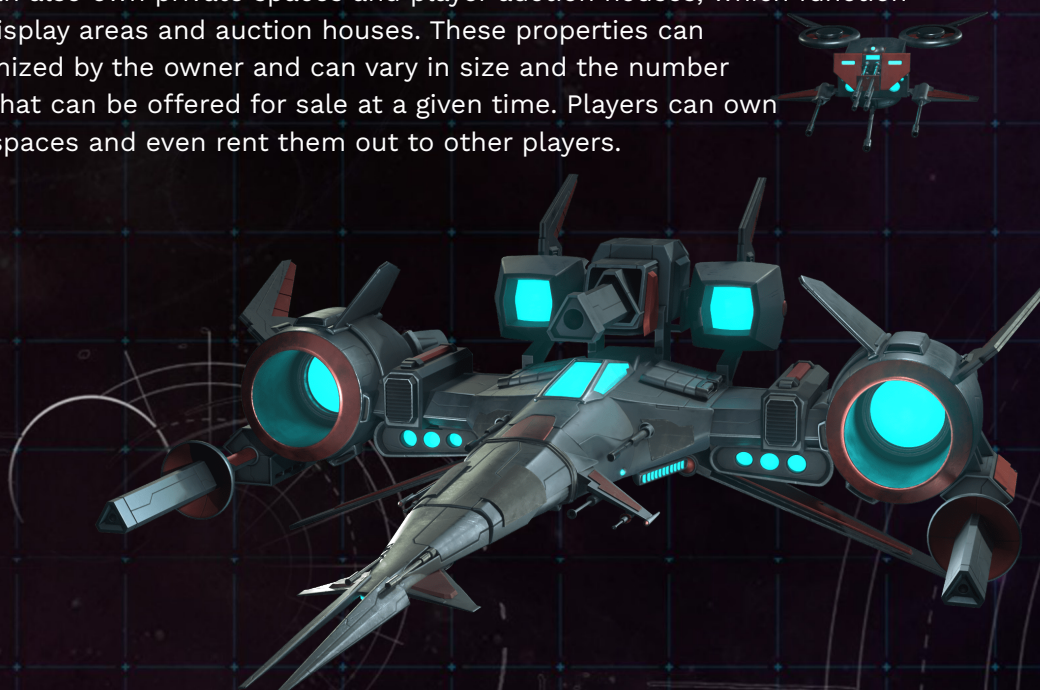

Is a planet that has developed into a city with luxurious real estate and a high-end lifestyle. At ArcanaLife, players can create their own colonies with houses, hotels, NFT stores, and advertising plots – all with stunning views.

Missions and quests offer players the opportunity to earn additional gear and \$ARCT tokens. These objectives come in different tiers, with daily, weekly, and lifetime rewards offered based on their difficulty.

ARCANA BANK

Following the Revolutionary Space War, Arcana Bank was established as a secure and corruption-free location for managing vital resources and currencies. Players on the Arcana Bank Planet can use Arcana Continuum NFTs and \$ARCT tokens to access a wide range of DEFI and loan services.

Players can also own private spaces and player auction houses, which function as both display areas and auction houses. These properties can be customized by the owner and can vary in size and the number of items that can be offered for sale at a given time. Players can own multiple spaces and even rent them out to other players.

ARCANA CONTINUUM SPACECRAFTS

Arcana Continuum Spacecrafts are unique 3D game-ready models created by top 3D and concept artists. These spacecraft can be used on the various Arcana planets and allow players to explore the lands with their own NFT.

The characteristics of each spacecraft include its color, abilities, atomic structure (speed, power, defense), and accessories (burners, weapons, lasers,

shields). The rarer a spacecraft is, the more \$ARCT coins players can earn from games and activities.

NFT investors can also generate daily income by renting out their spacecraft to players who do not own an Arcana Continuum NFT. This allows members of the community to profit without actively participating in games and activities on the Arcana planets.

ARCANA CONTINUUM PLAYER ACTIVITIES

The Arcana Continuum Metaverse is filled with exciting activities that will keep players engaged. Some activities require creativity and player intuition, and such activities reward players in the long run. Here are some possible activities in the Arcana Continuum Metaverse:

Missions and Quests

Missions and quests are one of the main activities in the Arcana Continuum Metaverse. They range from player-vs-player and player-vs-environment to individual player-vs-computer gameplays. Missions involve completing tasks for ARCT rewards, such as winning races and achieving the highest score. Quests include activities such as searching for secrets and treasures on different planets.

Battles

Battles are another activity that players can engage in to earn rewards. The WarZone is where players can compete using their ships, with the aim of destroying the most ships and earning the highest score.

In-Game Trading

In-game trading is another important activity in the Arcana Continuum Metaverse. Players can connect their wallets and trade assets such as NFT spacecraft and ARCT coins. They can also buy and sell real estate assets, and in the future, the Arcana Continuum may include full DEFI, allowing players to trade all kinds of digital assets.

Private Space Customization

Private space customization is an exciting activity in the Arcana Continuum Metaverse, as it offers limitless possibilities. Investors can build all kinds of real estate assets for personal or commercial use, and non-players can build assets to rent or sell later when their value appreciates. Investors can also buy and upgrade ships for personal use or for rent, and players can acquire and upgrade ships for a better chance of winning battles and quests. This activity also offers investors the best opportunity to generate revenue in the Metaverse.

Arcana Continuum Technologies

Arcana Continuum was built with the Open Metaverse and scalability in mind. It is hosted on the Ethereum blockchain, which is fast, secure, efficient, and scalable. The game is built with Unreal Engine 5, which enables developers to create high-quality 3D and 2D games with a wide range of features, such as physics simulation, character animation, and dynamic lighting. Smart contracts are used to execute all transactions, instructions, and processes in the Metaverse.

ARCT UTILITY TOKEN

In Arcana Continuum, the community requires a currency to pay for goods and services, such as acquiring and upgrading NFT spacecraft, real estate assets, and private planets. The ARCT token is an ERC20 token developed for utility in the Arcana economy. It is a method of decentralizing the Arcana ecosystem and will be used for various activities, including purchasing items and services, staking in games, and participating in the governance of the Arcana Continuum Metaverse.

ARCANA CONTINUUM ECONOMICS

Mint Treasury

The ETH stored in the mint treasury's wallet will be used for a specific number of purposes:

- 10% of the treasury will be utilized to purchase \$ARCT Tokens and burn them from the system.
- Another portion of the treasury will be used to purchase \$ARCT tokens and store them.
- For the development of the project.
- Other portions of this treasury may be used in-game rewards, such as DEFI, DAO, or NFT holding incentives.

Token Treasury

- The token treasury wallet will hold 20% of the \$ARCT Token supply.
- This treasury will support any forthcoming partnerships involving prominent Decentralized Exchanges or projects.
- Parts of this treasury could also be used to fund game rewards, such as DEFI, DAO, or NFT investments.

Game Rewards

- P2E (Play to Earn) mini-games can be found within our digital gaming Metaverse, where a user wins and gets paid in \$ARCT Token.
- Arcana Continuum Spacecraft owners will be able to participate in tournaments, missions, races, dogfights, and other micro-games to earn more \$ARCT Tokens.
- A total of 30% of the \$ARCT Token supply will be used for gaming rewards.

ARCT ECONOMIC SYSTEM

\$ARCT Burns

Tournaments and Missions:

50% of \$ARCT earned from tournaments and missions will be burned from circulation automatically.

Game Actions:

100% of \$ARCT generated from game actions will be burned from circulation automatically.

In-Game Item Purchases:

50% of ARCT generated through in-game item purchases from the marketplace will be burned from circulation automatically.

NFT Mint Treasury:

10% of the NFT mint treasury will be used to buy ARCT and burn it from circulation.

Transactions fees:

For every transaction (BUY / SELL) made on a DEX, 2% of ARCT will be transferred to the game rewards wallet and 3% ARCT will be burnt automatically from circulation.

\$ARCT Token Distribution

10% ARCT - Pre-Sale: Reserved for future pre-sale/s.

10% ARCT - Community DAO & Development: Locked for three years, 33.33% will be released each year.

10% ARCT - Team: Locked for four years, 25% will be released

10% ARCT - Liquidity Pool: Locked for ten years

10% ARCT - Defi: Locked for ten years, 10% will be released each year.

20% Arcana Continuum Treasury: Reserved for future use.

30% Arcana Game Rewards: Locked for ten years, 10% will be released each year.

To verify that these burning transactions are genuine, the Arcana Continuum public burn wallet will use a 'Proof of Burn' approach. Everyone in the community will be able to see how much ARCT has been burned.

DAO

Arcana's team will utilize a DAO to give the Flight Pass holders a say in the project's & company's growth. Every Flight Pass holder will have the right to vote on multiple decisions regarding the future of Arcana Continuum

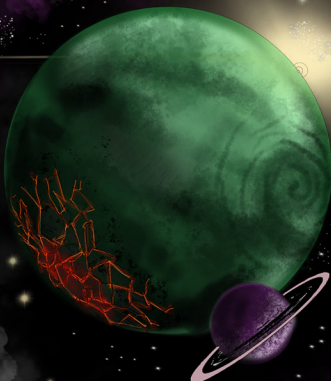

We will use blockchain technology to authenticate the ownership of non-fungible tokens (NFTs) in the wallet and grant holders voting rights on various development ideas for the Arcana Continuum. We will also give community members and spacecraft owners the option to contribute to the project's growth by sharing their ideas for improvement.

Members' participation in the community and the value they bring will also be taken into account, as will the number of Arcana Continuum spacecrafts they own. Each verified spacecraft / Arcanium

owner is encouraged to contribute suggestions for game improvement. All spacecraft and Arcanium owners will discuss and democratically choose the best suggestions. The owners whose recommendations and ideas are implemented will be rewarded with \$ARCT tokens.

In addition to the 10% of tokens allocated to the decentralized autonomous organization (DAO) and community development, the DAO will also receive 20% of the total earnings from NFT sales and the in-game market. These proceeds will be used for various purposes, including community development, raffles among our NFT holders, and much more.

Another important aspect of the DAO will be a charity wallet, which we will donate to a charity selected by the community every few months through a snapshot.

ROADMAP

Arcana Continuum was created in late 2021 with the primary goal of developing a large portion of the backend technology, such as game models, NFT, and the beta development of our mini-games and Metaverse. We started building our website and forming relationships with other NFT communities after acquiring a lot of this content. These partnerships will be announced during the launch of Arcana Continuum

Website: We have created a dazzling website that fits the theme of the Arcana Continuum project. You can access the website via any web browser at <https://arcanacontinuum.com/> and explore the contents.

NFT & concept Game

Development: We have designed all Ship and Flight Pass NFTs. The Metaverse game is also at a beta development stage. It will be deployed for testing in the first quarter of 2022.

Game development: we experimented with both our game modes and created two small demos to test both the game engine and game mechanics. Both demos will be available to the community for feedback in 2023

Development for Race planets:

Developing multiple race mode levels with all functionalities. We will take into consideration community input for the game and level design.

Development for the Arcana marketplace: developing in-game marketplace.

Hub World: development of players' hub areas such as NPC stores and auction houses. Improving all current game mechanics.

2021
2022

2023
H1

H2

Community Launch: We are currently building our community

First NFT Launch: We will be rolling our 899 Genesis Flight Pass NFTs.

Demo Release: Players can upload and tests their in-game assets in the Arcana Continuum Metaverse, explore and experience and give us feedback for the next stage of development

Development for Warzone planets:

Development of semi-procedural maps for tactical game style. The maps will feature a king of the hill type game.

Spacecraft customization systems:

improvements to gear systems and spacecraft visuals and stats.

Arcana Bank development: In-game DeFi system with multiple financing options

Token Launch: Some portion of the \$ARCT token will be launched on a Decentralized Exchange where everyone can bag them.

2024
H1

Arcana's Spacecraft Launch: A certain number of spacecrafts from our fleet will be minted for in-game usage

DEFI Launch: Launching staking of Arcana Continuum assets.

Private Spaces \ Player auction House

Development: An area owned by a player that functions as a display area and an auction house. Real estate is a physical location that the player owns and can be customized by him in varied visual styles.

ArcanaLife development: where users can create a new colony with houses, hotels, NFT stores, and marketing/advertising plots.

Game release early access!

Plans for the future:

Open-world game mode for exploration missions.

Integration with Meta, VR, and AR.
Cross-platform integration

PLANS

Open-world
game mode for
exploration
missions.

Integration with
Meta, VR, and AR.

Cross-platform
integration.

We eagerly anticipate your joining us on our journey, and we hope to see you soaring through the Arcana Continuum Galaxy in no time!

THE TEAM

Our team is comprised of some of the most skilled and experienced cryptocurrency and economics experts, as well as highly talented graphics, 3D, and tattoo artists. Additionally, our programming team has worked on many notable projects in the gaming and cryptocurrency industries. We are a group of individuals who are optimistic about the future of cryptocurrencies and the next generation of “Play to Earn” games.
